College Operations Copilot — product video storyboard

4:18 · 1920×1080 · narration: macOS Aman (Indian English) · demo recorded on the deployed app with synthetic data · CURRENT PRODUCT scenes show the deployed app; FUTURE ROADMAP is not built.

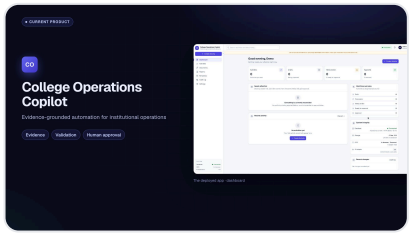

1. The problem CONTEXT 21 s

We started with a simple problem.

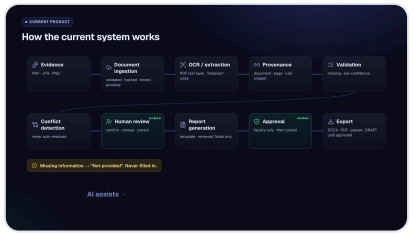

2. The core question CONTEXT 14 s

The challenge is not just generating a report. It is knowing whether the information in that report is actually supported by the evidence.

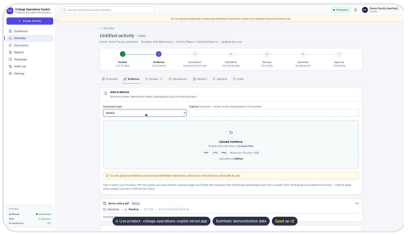

3. Introducing the product CURRENT PRODUCT 7 s

This is College Operations Copilot.

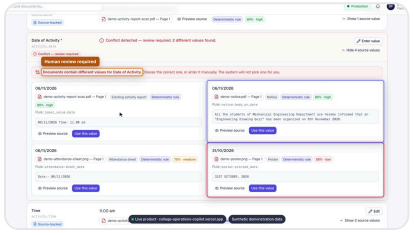

4. Current architecture CURRENT PRODUCT 30 s

Here is the current system. Faculty upload the evidence, and the text is read in the browser: from the PDF where possible, with OCR for scans.

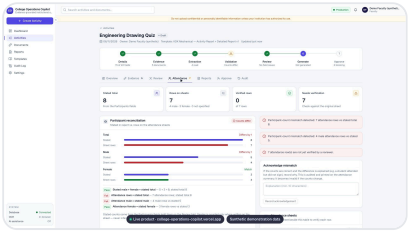

5. Live demo — sign in, create, upload, provenance CURRENT PRODUCT 29 s

Let me show you the deployed product, with synthetic documents.

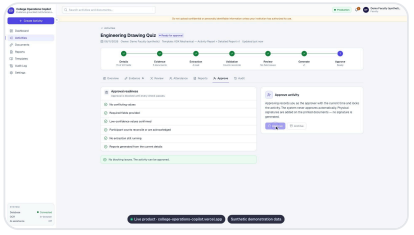

6. The date conflict CURRENT PRODUCT 22 s

This is the most important part.

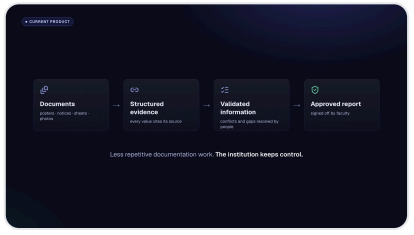

7. Attendance verification CURRENT PRODUCT 17 s

Handwritten attendance is difficult for OCR. So the system treats extracted rows as a draft, not as verified truth.

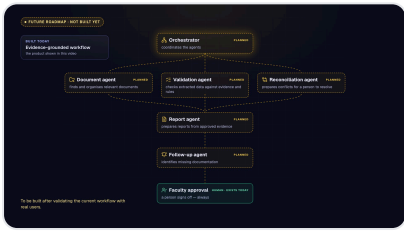

8. Live demo — reports, approval, export CURRENT PRODUCT 22 s

Next, I generate the reports. They are built only from the reviewed fields, using the department's template.

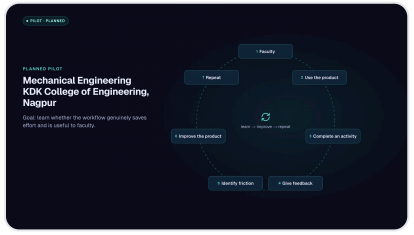

9. The result CURRENT PRODUCT 12 s

So: from scattered documents, to structured evidence, to validated information, to an approved report.

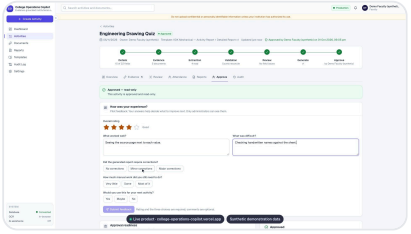

10. Future agentic system FUTURE ROADMAP 33 s

The current product focuses on this evidence-grounded workflow. The next phase, and this is a roadmap, not something that exists today, is specialised agents that coordinate these workflows.

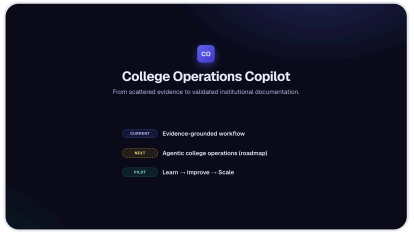

11. The pilot PILOT 18 s

That validation starts with a pilot, planned with the Mechanical Engineering department of KDK College of Engineering, Nagpur.

12. Feedback in the product CURRENT PRODUCT 17 s

To make that feedback systematic, the product asks for it.

13. Closing CONTEXT 14 s

College Operations Copilot: from scattered evidence to validated institutional documentation.
